

FREE ON FARM DRONE MAPPING SERVICE

P&F Global specialise in farm drainage around New Zealand.

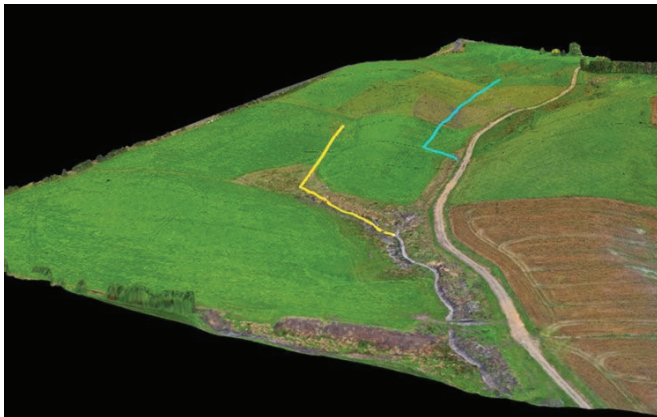

FREE ON FARM DRONE MAPPING SERVICE

P&F Global specialise in farm drainage around New Zealand.

Using comprehensive calculations from data collected by the drone + our on farm experience, we design a custom drainage plan that will make your land more productive.

WHY USE A DRONE?

The drone collects data and helps us to see what your farm drainage is looking like. We can see the good areas and those that may need some additional drainage.

HOW DO I GET A PERSONALISED DRAINAGE PLAN?

Our rural specialist will visit you on farm at a time that suits you.

Once the drone has mapped the farm, we then take away these pictures and use them to come up with a personalised drainage plan for your farm.

The drone footage ensures we can see the whole picture and from that we can create the right plan with the right size drainage and pipe system for your farm.

No more boggy unproductive paddocks not giving you good returns. Future-proof your farm for all weather events and ensure you are getting the best return out of your land.

HOW HAS EUROFLO® SLOTTED PIPE DELIVERED BETTER FARM DRAINAGE?

EUROFLO® slotted pipe has saved a Southland farmer hours of painstaking manual labour and delivered a real improvement in his farm's drainage.
