

EUROFLO® CULVERT CALCULATOR USER GUIDE

Determine your culvert pipe requirements in 3 simple steps

To find the EUROFLO® culvert pipe calculator simply head to **www.pandfglobal.com** and click on the EUROFLO® culvert calculator button.

STEP 1
Select your catchment area size and rainfall volume in the dropdown boxes.

How many hectares is your catchment area?
Please select closest option.

[Select one] v

Need help determining the size of your catchment area? Use the maps found [here](#).

Select rainfall volume

Need help finding out your rainfall volume? Use the maps found [here](#).

Euroflo Culvert Pipe Size

[Text box]

STEP 1

Select your Rainfall Catchment Area and Volume

- > Enter your catchment area size in the first drop down box. Need help determining the size of your catchment area? Use the maps found under the dropdown menu.
- > Select your rainfall volume from the options in the second drop down box. If you don't know, simply use the maps found by clicking on the link under the dropdown menu and note the colour of your rainfall band. If your catchment falls across two bands use the higher band.
- > The EUROFLO® culvert pipe size you require will automatically appear in box 3.
- > If you have a very large catchment area and/or are in a very high rainfall area you will need expert advice. Please contact us directly for guidance on what is best to install on 0800 99 77 33 or sales@pandfglobal.com

STEP 2
How long is your culvert pipe job?
Total pipeline length in metres (m)
